Intelligent Process Optimization

Factory owned Service Center

Driven tool holders are under enormous strain. To maintain highest performance and to avoid unplanned machine downtime, it is necessary to inspect your tool holders regularly. Our factory-owned service center maintains a full-stock of original spare parts to get you up and running quickly.

Quality without Compromise

To guarantee best performance and precision we provide professional maintenance and rebuild services by our own highly qualified service technicians - factory trained and skilled in spindle and bearing assembly. WTO service comes with a 90 day parts and labor warranty.

Original Spare Parts

In order to achieve high quality standards, we only use high quality spare parts and components, supplied directly from our factory in Germany. This ensures that the repaired tool holder achieves the same performance and precision as new.
